

Amendments of the Claims:

A detailed listing of all claims in the application is presented below. This listing of claims will replace all prior versions, and listings, of claims in the application. All claims being currently amended are submitted with markings to indicate the changes that have been made relative to immediate prior version of the claims. The changes in any amended claim are being shown by ~~striketrough~~ (for deleted matter) or underlined (for added matter).

1. (Currently Amended) A color-safe fabric wrinkle removing and refreshing composition to be applied on casual to fine clothing and fabrics, comprised of: a) water in a range of 82% to 94% by volume; b) ~~one or more surfactants~~ surfactant in a range of 0.005% to 5% by volume; c) ~~one or more alcohols~~ alcohol in a range of 6% to 18% by volume; d) ~~an effective amount of one or more acids~~ acid in an amount sufficient to lower and maintain the pH to within a range that ensures the composition is color-safe; and, e) ~~one or more water soluble fragrances~~ a malodor-eliminating compound having the form of a semi-rigid, concave molecular structure complex that synergistically combines numerous active ingredients for chemically modifying malodorous compounds, in a range of 0.001% to 5%.
2. (Currently Amended) The composition of claim 1, wherein said water is process quality softened, filtered water ~~present in an amount of from 82 to 94 percent by volume.~~
3. (Currently Amended) The composition of claim ~~2~~ 1, wherein said surfactant is a ~~one or more surfactants~~ are non-ionic surfactant surfactants.
4. (Currently Amended) The composition of claim ~~3~~ 1, wherein said ~~one or more alcohols are~~ alcohol is selected from the group consisting of ethanol, propanol, and isopropanol ~~present in an amount of from 6 to 18 percent by volume.~~
5. (Currently Amended) The composition of claim ~~4~~ 1, wherein ~~said effective amount of one or more acids are~~ the acid is selected from the group consisting of (i) glycolic acid, (ii) citric acid, (iii) glacial acetic acid, (iv) tartaric acid, (v) oxalic acid, (vi) sulfamic acid, (vii) sulfuric acid, and, (vii) phosphoric acid ~~to lower and maintain the pH to within a range that ensures the composition is color-safe.~~

6. (Currently Amended) The composition of claim ~~5~~ 1, wherein said ~~one or more nonionic surfactants~~ surfactant is a linear alcohol ethoxylate surfactant.

Cancel claims 7 and 8

7. -8. (canceled)

9. (Currently Amended) The composition of claim ~~8~~ 6, wherein said nonionic linear alcohol ethoxylate surfactant ~~is selected from the group consisting of nonionic linear alcohol ethoxylates having~~ has from 8 to 15 carbon atoms.

Cancel claims 10-12

10. - 12. (canceled)

13. (Currently Amended) The composition of claim 1 ~~12~~, wherein the addition of an optional ~~pure~~ further comprising a quaternary ammonium compound that dries to a non-tacky solid, in a range of 0.001% to 2% ~~is added to the composition in an amount of from 2.0 and 0.001 which mitigates against static cling without significantly increasing residues.~~

14. (Withdrawn) A method of applying the composition of claim 12, on household or commercial fabrics by applying a fine, uniform mist spray comprising the step of spraying the composition on said fabrics using a pre-compression sprayer or any other acceptable spray application.

15. (Withdrawn) The method and composition of claim 14, wherein said composition is spray applied uniformly, employing a multiple volume per stroke, constant particle size, pre-compression sprayer, having settings marked specifically for a range of fabrics from casual wear at large volume spray to silks at small volume spray and to off at no volume for traveling without leaking, applying approximately one ml per stroke on average, which is sprayed from a distance of approximately eight to twenty four inches; and, then allowing the fabric to dry in a relaxed state.

16. (Withdrawn) The method and composition of claim 15, wherein the process employs a commercially available trigger or pump pre-compression sprayer.

17. (Withdrawn) A method for enhancing wrinkle relaxation, wrinkle reduction or elimination of wrinkles consisting of the steps of applying the composition of claim 12, wherein, just after applying the composition in a fine, uniform mist on a fabric or garment, the mechanical action of the applicator's free hand brushing gently over or across the fabric, or gently shaking the hanger upon which a treated garment is hanging, imparts low level energy to de-wrinkle said fabric or garment.
18. (Withdrawn) The method and composition of claim 17, wherein the spray application of the composition is followed by the mechanical action of the applicator's hand or hands forming and de-wrinkling the fabric.
